

ARPIT KRISHNA

Software Engineer – Backend Systems, Distributed Systems, Secure API Integrations

☎ +91 87078 30860 | ✉ krishnaarpit930@gmail.com | 🔗 LinkedIn | 🐙 GitHub | </> LeetCode | 🌐 Portfolio

TECHNICAL SKILLS

Languages: C++, C, Go, Python, Java, JavaScript, SQL

Backend and Frameworks: Gin, Spring Boot, Spring Security, FastAPI, Django, Node.js, Express.js, Hono.js, REST APIs, Microservices, Kafka, JWT, JUnit, Maven

Frontend: React, Tailwind CSS, Vite, Chart.js, HTML, CSS, Progressive Web Apps (Service Workers, Offline Sync)

Databases and Infrastructure: PostgreSQL, MySQL, MongoDB Atlas, Amazon DocumentDB, Valkey (Redis), Prisma, AWS (SQS, S3), Docker, Linux, Git, GitHub Actions, CI/CD, Postman, Vercel, Render, Cloudflare Workers, Aiven

Core CS and Data: Data Structures and Algorithms, System Design, Distributed Systems, OOP, Caching, Deduplication, Idempotency, Encryption, Web Scraping, Root-Cause Analysis, Pandas, NumPy, Scikit-learn, OpenCV

WORK EXPERIENCE

Software Developer – Backend Systems

Aug 2025 – Present

Cars24

Gurugram, India

- Architected and built a challan payment fulfilment service solo in Go, processing **3,000–4,000 payment requests daily** from 4 portals and automating **~80%** via a payment bot with idempotent HMAC webhooks
- Prevented cascading failures on the external payment gateway with a **5-layer anti-flooding stack** (cooldowns, daily caps, circuit breaker), and added TAT-based SLA tracking at every lifecycle stage
- Rebuilt the Acko client API integration by auditing request and response flows and closing data-quality gaps, raising success rate from **50–60% to 90%+**
- Held API latency below **3 seconds** for SLA-sensitive B2B workflows across Acko, Policybazaar, Paytm, Zoop, and Go Digit
- Delivered third-party integrations built on **encryption and decryption, API orchestration, and web scraping**, and resolved P0 incidents in live production
- Owned backend delivery of the **PRISM** issue-reporting platform, building dashboards and debugging tools that accelerated root-cause analysis of production defects
- Cut redundant downstream calls with **deduplication and caching**, improving production stability and data reliability
- Authored design documents weighing performance, scalability, and downstream-impact trade-offs, then shipped changes through staged rollouts, feature flags, and rollback plans
- Mentored **3 interns** and reviewed every AI-generated change from **GitHub Copilot and Claude** before shipping

PROJECTS

Hal-Jivi: Secure Crop MSP and Supply Chain Platform

Feb 2025 – May 2025

FastAPI, REST APIs, Ethereum Smart Contracts, Scikit-learn, Pandas

- Architected a distributed supply-chain platform with backend APIs, smart contracts, and ML pipelines, improving crop-pricing transparency and reducing fraud risk by **30%**
- Integrated real-time MSP prediction with optimized request handling through OOP design and modular API boundaries

Expensify: Expense Tracker with Budgets and Overspending Alerts

🔗 Live | 🐙 Frontend | 🐙 API

React, Spring Boot, Spring Security, MongoDB Atlas, JWT, Docker, JUnit

- Built a full-stack expense tracker with category budgets as an installable PWA whose offline queue syncs on reconnect
- Secured the API with **JWT authentication**, BCrypt password hashing, and a login lockout that returns **HTTP 429** after repeated failed attempts, blocking brute-force logins
- Made recurring payment posting **idempotent** with an atomic MongoDB findAndModify, so the 15-minute scheduled job posts rent, EMI, and bills without duplicates
- Returned consistent JSON errors from a global exception handler, covered by **JUnit** unit and integration tests

Medium-Clone Blogging Platform

Feb 2025

Hono.js, Cloudflare Workers, PostgreSQL, Prisma, React, JWT

- Built a serverless blogging platform on Cloudflare Workers with secure sign-up, JWT authentication, and blog CRUD

EDUCATION

Pranveer Singh Institute of Technology (PSIT), Kanpur

2025

B.Tech in Computer Science and Artificial Intelligence

CGPA: **7.76 / 10**

ACHIEVEMENTS

- **GATE 2025 AIR 1852** and **GATE 2024 AIR 3234** in Computer Science and Information Technology
- **LeetCode Knight Badge** (top 5% globally); **HackerRank** 6-Star Problem Solving, 5-Star Python, 5-Star C++
- **GFG Hackathon** Regional Qualifier with Google Cloud and AMD; **TCS iON NQT** 90%+ in IT and Psychometric assessments

CERTIFICATIONS

JP Morgan Chase Software Engineering Simulation (Forage) | DSA using Python, OOP in Python (Infosys Springboard)

AWS APAC Solutions Architecture (Forage) | NLP Embeddings (Hasso Plattner Institute)

Responsive Web Design (freeCodeCamp)
